CLAIMS

- Claim 44 has been amended as follows:

Claim 44. (Currently Amended) The method of claim 35, ~~in order to cool thermally loaded components, the gas turbine system comprises: a compressor that takes in suction air on the inlet side and compresses it to compressor end air that is available on the outlet side, a combustor in which a fuel is burned by using the compressor end air while resulting in the formation of hot gas, as well as a turbine in which the hot gas is expanded while providing work output, whereby, in order to cool~~ comprising cooling thermally loaded components of the combustor and/or the turbine ~~[[.]]~~ using first cooling lines from the compressor ~~and/or the outlet of the compressor to components~~ and second cooling lines from the components back to the compressor ~~and/or the outlet of the compressor are provided~~, wherein a cooler is located in the second cooling lines and wherein the components to be cooled are provided with drilled film cooling openings that

communicate with the first and second cooling lines, wherein means for cooling the cooling air are located in the first cooling lines.

- Claims 48-51 have been canceled. Note that these claims are substantial duplicates of claims 33, 15, 16, 23 as the independent claim 32 already claims the film openings are drilled [see page 10 of applicant's remarks of 03/13/2007].
